Question : There are two array:

A	C	F	G		D	B	D	
B	F	G	H	A	F	C	F	D

First row represents firts array as parent node and second row represents second array.

Example :
A is parent of B, C is parent of F and so on , while if upper array dont have any value that means in respective child array value is root node. Here **A** and **D** are root node.

Problem explanation : Need to print all parent and their child.
Example :

```
a -> b -> c -> f -> g.
d -> f -> g
```
